Project name: UBC Explore (AR)

Description:

The UBC campus is large and it takes effort to explore and understand every part of it. Our app proposes to decrease the difficulty through showing the history of UBC by the tip of your fingers. If a tourist or a student wanted to know more about a part of the campus they can direct their phone camera to the location and our app would give them a brief summary about the location and direct them to related resources. To encourage people to explore we will hide away AR caches that can be found around the campus for leaderboards and prizes.
